

Planalyse

Next-generation AI plan
drawings validator and data
tool

Good afternoon, my name is Lan Nguyen, Planning Digital Transformation Officer at Oxford City Council. This is Kieran - Our resident genius

I'm here to tell you about how AI can help solve an issue our planning teams face from household to complex planning applications with Planalyse, our next gen AI floorplan validator

Our discussions with the PlanX team tell us that plan drawings are the final frontier of Validation. Planalyse takes the pain and time out of handling image documents, which are difficult to handle with traditional rule-based approaches.

Inefficiencies from household to complex applications

- **What's the problem?:**
 - **Applicants:** Lengthy validation requirements for drawings – local and national standards
 - **Planning Officers:** Applications, DM, Plan monitoring and CIL teams
- **What can Planalyse do for you:**
 - An Image-based AI which extracts key features from submitted drawings for validation
 - Save hours of time for officers across departments in manually handling submitted drawings

Applicants have to navigate lengthy validation requirements; Oxford's local validation requirements are 61 pages long... this is challenging to navigate and often incomplete drawings are submitted.

Planning officers from DM, to Policy Monitoring and CIL are so stretched for capacity, and it's exhausting when we spending hours dealing with invalid submissions and manually handling drawings. This leads to administrative delays and inaccuracies and avoidable stress across our planning department, when we want to prioritise processing applications and working on our local plans.

Our Solution – Planalyse

Planalyse - Floor Plans

Floor Plan Detective

Deploy

Impact + Future potential

1

Clarity for applicants. 100+ Hours of time savings annually per officer, manually verifying floor plans and planning drawings, particularly for complex schemes- flexible to Council's requirements.

2

Data could be extracted for floorplans - significant for monitoring and CIL. Can be used for officer reports and integrated with backend systems.

3

Can expand to verify data for all types of plan drawings submitted as part of an application (e.g. block plan, detailed drawings, elevations)
